

FLYDUBAI PARTNERS WITH EMARATECH TO INTRODUCE SMART BIOMETRIC GATES

News / Airlines, Airports / Routes

As part of its ongoing commitment to innovation and investing in the latest technologies, flydubai has partnered with emaratech to implement smart border control solutions for its pilots and cabin crew. Located at the carrier's Airport Operations Centre, the new smart gates utilise advanced biometric technology, AI-driven verification and real-time data integration to streamline immigration processes. This provides a faster and more efficient immigration experience for its flight operations, supporting the carrier's commitment to operational efficiency, especially during busy travel periods.

His Excellency Thani Alzaffin, Group Chief Executive Officer of emaratech, commented: "we are proud to partner with flydubai in pioneering a next-generation, paperless immigration experience for their crew members. Through the integration of AI-powered facial recognition technology, our smart gates seamlessly connect with both flydubai's and immigration's platforms, enabling real-

time validation and a truly frictionless journey. This reflects emaratech's continued commitment to redefining border control processes—making them smarter, faster, and more secure. By harnessing the power of artificial intelligence, we are shaping a future where innovation drives convenience and trust at every checkpoint. We look forward to deepening our collaboration with flydubai across future initiatives that further enhance the travel experience for both passengers and crew."

Mohammed Hareb AlMheiri, Chief Procurement & Technology Officer at flydubai, stated: "We are pleased to have partnered with emaratech to implement this innovative solution for our pilots and cabin crew. We always look for opportunities to harness the latest technologies that support our growth and operational efficiencies and with the introduction of these biometric smart gates, this marks another step towards fostering a more seamless, punctual and secure operation as we future-proof our systems."

The carrier continues to invest in technologies that improve the daily experience of its frontline teams. Six smart biometric gates have been installed at the flydubai Airport Operations Centre where the crew report for their flights.
