

AZZERA ANNOUNCES GENERAL AVAILABILITY OF CELESTE

News / Business aviation

Azzera announced commercial launch of Azzera CELESTE. The subscription-based model will launch on October 18. Azzera CELESTE is a first-of-its-kind B2B SaaS solution for emissions measurement and compliance management. The platform is fully compliant with EU-ETS, UK-ETS, CH-ETS and CORSIA reporting frameworks, allowing aircraft operators to address the challenges of emissions compliance management in a singular forum. CELESTE also provides data validation, automated compliance reporting and direct access to compliance credits and sustainable aviation fuel certificates via its secure 'book and claim' ledger.

Puja Mahajan, CEO and Co-Founder, Azzera, commented: "Since introducing CELESTE at EBACE earlier this year, we have made rapid strides in product development. Moving smoothly through alpha and beta phases, we will launch now general availability. Working closely with leading business aircraft fleet operators, we managed more than 150 aircraft throughout our development cycle. This work has enabled us to harness invaluable feedback and create an online solution that is truly tailored to the needs of business aviation."

Johan Maertens, Co-CEO, ASL Group, said: "As an Azzera CELESTE beta tester, we were impressed with its emissions measurement and compliance management capabilities. Its intuitive design streamlines our data integration and compliance reporting processes. Additionally, it provides immediate access to emissions allowances and various credits. We are confident that CELESTE is a pivotal tool for the aviation industry's transition to sustainability and eagerly anticipate its commercial launch."

"Utilizing Azzera CELESTE during its beta phase was transformative for our operations," shares Frans Dechaene, Director of Operations, FLYINGGROUP. "The platform makes emissions measurement and compliance management effortless, but it also offered us direct and instantaneous access to a marketplace of compliance credits and SAFc. As we collectively navigate towards a Net Zero future in aviation, having a resource like CELESTE is invaluable."

Azzera also continues to offer invaluable greenhouse gas advisory services, including an SAF 'book and claim' system, carbon accounting and custom carbon credit portfolio management. Azzera's services are designed to provide comprehensive support to business aircraft operators that facilitate the secure and seamless management of emissions and implementation of effective sustainability initiatives.
