

INNOVATION, EFFICIENCY AND MORE SERVICES FOR GENEVA AIRPARK CUSTOMERS

News / Business aviation

Geneva Airpark is offering the following new services to its customers:

- A new option for quick parking and hangaring for business jets
- New, battery-operated eGPUs and a dry exterior cleaning process for aircraft which save time, cut costs and reflect our commitment to the environmental policy developed by Geneva Airpark.

Now you can reserve covered storage at a moment's notice

Geneva Airpark is strengthening its Daily Flexibility options for business jet parking at Geneva Airport. Along with our offers for up to 3 hours, 3-8 hours and 8 -24 hours, it is now possible to make a last-minute reservation for hangaring your aircraft.

Our clients just have to contact us as soon as their aircraft arrives at Geneva to take advantage of our hangar and made-to-measure services.

Four new Zero Emission eGPUS

Geneva Airpark has shown its commitment to innovation and environmentally-friendly development by acquiring all electric ITWGSE 7400 Zero Emission eGPUs. These allow users to avoid the current constraints on the use of APUs (10 minutes on arrival / 30 minutes on departure) and reduce costs. These new-generation, high performance APUs, which are powered by batteries, are highly maneuverable. They will eliminate noise nuisance and fuel use and limit electricity consumption, thanks to an optimal charging time and battery life.

Dry cleaning of aircraft exteriors

Another new service Geneva Airpark is offering to its clients is the exterior dry cleaning of business jets using the SKYWASH® product range. This process not only cleans the aircraft gently, but also polishes the surfaces for a lasting shine.

This non-abrasive formula is a real time-saver, as it eliminates all trace of de-icing products, as well as the drying, greasing and lubrication operations that are essential after a water clean.

As well as being more efficient and offering long-term protection against corrosion and other irritants (UV, salt, acid rain etc.), the water-based process is also more environmentally friendly, as it avoids the use of water during cleaning.

PART-145 certified Geneva Airpark has been operational at Geneva Airport since 2009 and offers a range of services for business aviation. Geneva Airpark has 20,000 sq m of facilities (hangar, ramp, offices, car park), directly accessible from the runway, near Geneva Airport's C3 business aviation Terminal.
