THE FIRST CANDLE BLOWN ON THE BIRTHDAY CAKE OF MSB AEROSPACE LLC

News / Business aviation

The first candle blown on the birthday cake of MSB Aerospace LLC, celebrating the first year of production at its Savannah, Georgia facility. Opened late in 2017 to better serve the US market, the facility has quickly ramped up to manufacture customized, precision-engineered products for the business aviation sector. To date, the operation has produced a variety of bespoke crystal, china and flatware stowage inserts (CCF), more than 50 single and dual pedestal hi-lo tables, personal device holders, and a collection of MSB's innovative up-lit glass holders.

When production began in Savannah, MSB Aerospace LLC employed nine people. Today the staff numbers 22 with more recruits anticipated to join in the next six months. The 10,000-sq-ft production unit is expected to produce up to 30 percent of MSB's total North American output this year, and the company is eyeing 60,000 sq. feet for further expansion.

"Clients are very happy that we've established a U.S.-based manufacturing presence. It allows us to better manage product costs as materials are sourced in the US, so we save

the expense, and risk, of moving materials across borders. We have reduced potential customs delays, eliminated currency fluctuations, and negated import taxes," says Shannon Gill, Managing Director, MSB Aerospace LLC. "Our clients expect very high quality and so far the items are fulfilling their expectations. We look forward to continuing to build our U.S. presence."

The first inserts and tables came off the line in January 2018 with delivery to the new production unit's first customer, Gulfstream, following swiftly after. Subsequent products were destined for a mix of completion centres including L3, OEMs and private owners based throughout the U.S.A. The company began 2019 with orders to supply products to six new clients with delivery occurring this year.

Looking to the next year, in addition to manufacturing its own products, Gill is hoping to add build-to-print support for customers shortly. Several newly manufactured items will also enter production this year including variations on tables, new mechanisms and products for new aircraft platforms.

Senior management, clients, partners and local Savannah government officials celebrated the success of MSB Aerospace's first year during an event held at the Mighty First Eighth Airforce museum in its home town of Savannah. Gill thanked local government for their support, customers for their business and acknowledged the hard work and dedication the newly created team members had given to make the first year a success.

About MSB Group:

Montreal-based MSB, part of the Sogeclair Group, is formed of MSB Design and MSB Ressources Globales. From 2005 MSB has provided a one-stop service for customized precision-engineered products to the business aviation sector. MSB Ressources Globales is the engineering contract company providing long term project specialists and work packages to the aerospace industry.

The company know-how is driven by the concepts of quality, integrity and achievement, which has earned it a reputation for paying careful attention to details. MSB has developed leading-edge expertise in this highly-specialized sector

MSB has three defined product categories; Crystal, China & Flatware inserts (CCF), Mechanisms, including Single pedestal Hi-Lo conference tables and cabinets. Whilst MSB Ressources Globales provides over 400 specialized engineers to the aviation sector.

MSB Global Resources and MSB Aerospace are the Unites States based subsidiaries of Sogeclair, located in Wichita, KS. and Savannah, GA. respectively, and are providing the same high-end aerospace solutions as their Canadian parent companies.

Customers are leading OEMs including Bombardier, with whom it has worked since inception, and more recently Embraer and Gulfstream, in addition to completion centers and design houses. It provides products to the international sector and is dedicated to living up to its reputation for reliability, quality, and innovation.
