

UAS LAUNCHES GTMX FOR FLIGHT OPERATIONS NEW ERA IN TRIP MANAGEMENT TECHNOLOGY

News / Business aviation

UAS International Trip Support returns to NBAA's Schedulers and Dispatchers this week for the live launch of GTMx – the next-generation trip management platform designed to transform how flight departments create, manage, and track trips. Built with a mobile-first mindset and engineered around the real-world experience of operations teams, GTMx redefines operational control, speed, and clarity. Abdul Charafeddin, Executive Vice President, USA and team will be demo-ing the system at Schedulers.

UAS Founder and Executive President, Mohammed Husary commented: "GTMx is the technology the industry has been waiting for; a super app set to revolutionize trip planning as we've known it until now. By combining real-time visibility, streamlined workflows, and intuitive mobile-first design, GTMx empowers operations teams to plan, manage, and execute trips with unprecedented speed, clarity, and confidence."

GTMx is the trip management technology the industry has been waiting for reimagined around the operator experience. Rebuilt from the ground up with the latest mobile-first architecture and a completely new user interface, GTMx enables flight departments to manage missions from anywhere, at any time. The platform eliminates fragmented workflows, email chains, and disconnected communication tools, delivering a unified, intelligent experience.

GTMx delivers the ultimate user experience through simplified workflows, total trip visibility, and

accelerated submission processes. Operators can now create and submit a trip in just three simple and fast steps without relying on multiple communication platforms. The result is continuity, speed, and total operational clarity.

GTMx capabilities include:

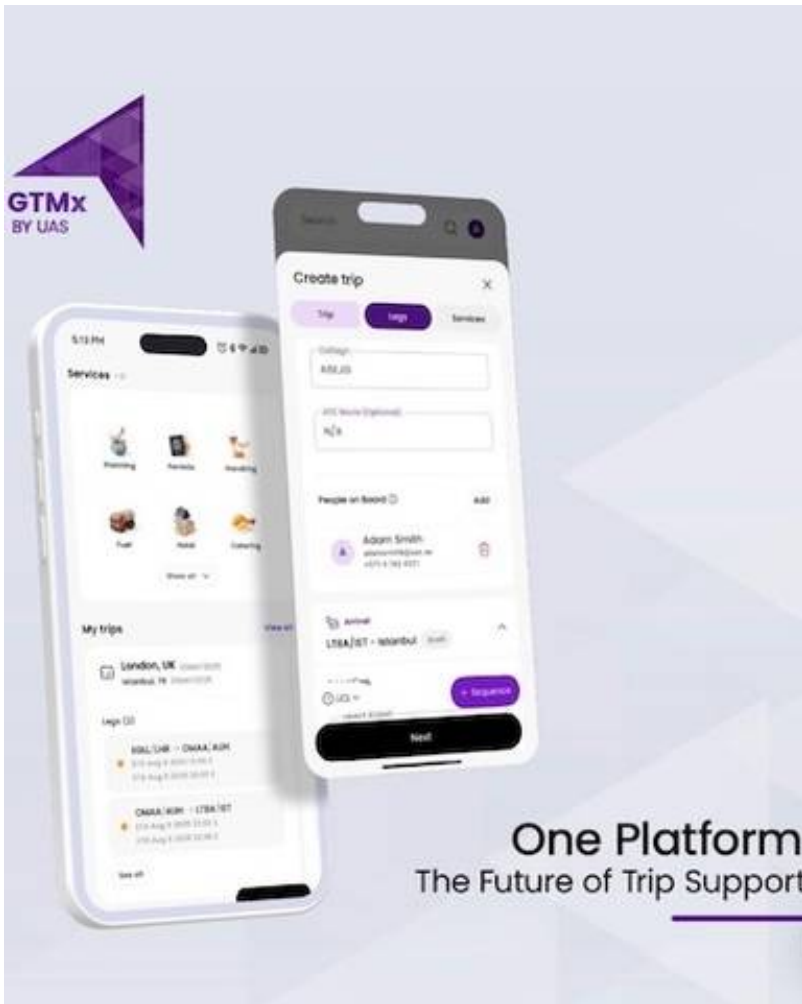

- Real-Time Visibility: Instant insight into exact trip status
- Simple Trip Creation: Submission in three streamlined steps
- Greater Flexibility: Submit trips independently or with UAS Ops support
- Total Situational Awareness: Instant alerts and notifications across the operation
- Centralized Fleet Management: Full fleet oversight from one intelligent dashboard
- Pre-Planning Intelligence: Integrated airport data, immigration, weather, and NOTAMs
- Collaborative Control with Live Workflows: No more email chains or WhatsApp threads

By centralizing chat, documentation, and trip data into a single structured environment, GTMx provides a modern, intuitive workflow tailored for operational efficiency. It also integrates seamlessly with leading scheduling systems, ensuring continuity within existing tech ecosystems, including Avianis, PFM, and Leon. This interoperability ensures flight departments can enhance their operational capabilities without disrupting established infrastructure.

Beyond launch, GTMx's roadmap includes advanced intelligence and optimization tools designed to further elevate operational performance. Upcoming capabilities including live AI-Powered Analytics, Fleet & Schedule Optimization, Reliable Global Resource Integration, Cost & Carbon Reduction Tools, and AI Optimization Engines position GTMx not just as a trip management tool, but as an intelligent operational command platform.

With GTMx, operators gain multiple game-changing benefits:

- Faster operational turnaround
- Elimination of fragmented communication platforms
- User-friendly, structured trip creation and management
- Centralized chat and documentation within a single ecosystem
- Real-time operational clarity and extended situational awareness
