

EMBRAER SELECTS HONEYWELL JETWAVE FOR LINEAGE 1000E HIGH-SPEED DATA CONNECTIVITY

News / Business aviation, Events / Festivals, Manufacturer

Embraer announced the selection of Honeywell's JetWave™ Ka-band technology to power the Lineage 1000E business jet's high-speed data connectivity through Inmarsat's Jet ConneX™ satellite service. The first Lineage 1000E with this new feature will be delivered in the first quarter of 2018.

"Since entering the market, Embraer Executive Jets has been committed to rethinking convention in business aviation by introducing innovative technologies, higher performance standards, and premium comfort for a superior flight experience," said Luciano Castro, Vice President Programs, Embraer Executive Jets. "This is just one more way that the Lineage 1000E delivers on its promise of enhancing every customer's experience."

Honeywell's JetWave™ technology connects to Inmarsat's Jet ConneX™ satellite service, which delivers speeds of up to 15 Mbps and seamlessly integrates with the Honeywell Ovation Select entertainment system onboard the Lineage 1000E to deliver high-speed Wi-Fi throughout the aircraft's 750 sq. ft. (70 m2), divided into five distinct zones.

The loft-size cabin, with aft private suite, mid-section lounge with three seating areas, dining area, and crew lounge forward of the cabin, provides passengers the ideal venue for enjoying much faster and more reliable in-flight Wi-Fi connectivity, allowing video streaming and cloud content

access from any of these areas. With a performance equivalent to that of a home or office, the conditions are ideal for continuous business productivity as well as for entertainment enjoyment through personal digital devices or on the aircraft's Media Center, which delivers high definition video with 5.1 surround sound.
