

EXECUJET MRO SERVICES SECURES SOUTH AFRICAN APPROVAL FOR EMBRAER LEGACY AIRCRAFT MAINTENANCE

News / Business aviation, Maintenance / Trainings

ExecuJet MRO Services Middle East has commenced performing heavy maintenance checks on South African-registered Embraer Legacy aircraft following the receipt of regulatory approval. The South African Civil Aviation Authority has officially approved ExecuJet MRO Services Middle East's Dubai facility to conduct heavy maintenance checks on the Embraer EMB-135/145 series (Legacy 600/650 series), including checks up to 192-month checks. The company operates a 15,344 square meter (165,160 square feet) state-of-the-art MRO facility at Al Maktoum International Airport in Dubai.

ExecuJet MRO Services Middle East has already welcomed its first two clients, with their Legacy 600 aircraft currently undergoing 96-month and 144-month airframe maintenance checks in its hangar. Additional services include shipping one aircraft's landing gear to the United States for overhaul.

Being already certified by the European Aviation Safety Agency (EASA) for heavy maintenance on Legacy aircraft, ExecuJet MRO Services Middle East's certification by the SACAA was facilitated through the auditing and validation of its EASA credentials. The SACAA's endorsement marks the 18th civil aviation regulator to certify ExecuJet MRO Services Middle East.

Nick Weber, Regional Vice President for the Middle East at ExecuJet MRO Services, commented: "Dubai facility secured this business due to the aircraft already operating in the Middle East. As business and trade between the Middle East and Africa continue to grow, we anticipate more opportunities to serve operators from the neighbouring African region."

He also credits the new contracts to ExecuJet MRO Services Middle East's status as an Embraer Authorized Service Centre as well as a Rolls-Royce Authorized Service Centre for engines including the BR710 and AE3007A series, which power the Legacy aircraft. Certain engine manufacturers require MRO providers to be authorized service centres to perform engine changes which are under their programmes.
