

EXECUJET MRO TO CONSTRUCT NEW MRO FACILITY AT SUBANG AIRPORT

News / Maintenance / Trainings

ExecuJet MRO Services Malaysia will soon start construction of its new purpose-built MRO facility at Kuala Lumpur's Subang Airport, a development that reinforces Malaysia's position as a centre for business aviation in the region. The airport itself is largely dedicated to general and business aviation. The company, which is already Malaysia's largest business aviation MRO, serves Dassault, Bombardier and Gulfstream operators from across the Asia region and is certified by the CAA of Malaysia, US FAA, EASA and many other international airworthiness authorities. It is able to quickly dispatch repair teams around the region, when needed, including to growing markets such as Vietnam.

The new purpose-built MRO facility will be located at another area of the airport with runway access and a dedicated apron. The new facility will have a gross floor area of approximately 149,500 square feet including back shops that will further expand ExecuJet's capabilities, as well as corporate offices and customer areas.

The facility's aircraft hangar will be able to accommodate the largest business jets in development, such as the Dassault Falcon 6X and Falcon 10X. It will also incorporate environmentally friendly features such as an 85kW solar system and secondary water tanks to

harvest rainwater for secondary usage, amongst others.

The company decided to build a larger facility to cater for the increasing demand for its services. Construction is planned to commence within the next six weeks.

Regional VP Asia for ExecuJet MRO Services Ivan Lim commented: “The number of business jets in Asia, especially South-East Asia has continued to grow, despite the pandemic. Business people have been turning to business aviation to meet their flying needs, because it is time-efficient with far fewer ‘touch points’ as compared to commercial aviation. ExecuJet MRO Services Malaysia has been expanding its capability and workforce to meet the continued growth in the market. We take trusted and proven talent, that we have developed internally, and provide them with opportunities to further develop their careers. This is how we created a strong company culture and a cohesive international network providing our business aircraft customers with consistently high levels of service.”
