

LEARNING TO FLY IN BAD WEATHER

News / Business aviation, Maintenance / Trainings, Manufacturer

[Garmin](#) has started a Weather Radar Operations eLearning Course through the flyGarmin website. The course introduces pilots to basic and intermediate weather radar operations and goes beyond the pilot's guide, ensuring pilots utilize the benefits provided by on-board weather radar. In addition to operational practices, this course will also cover radar interpretation and analytical techniques, which aid in the decision-making process and help pilots make better in-flight weather-related decisions.

The Weather Radar eLearning Course introduces pilots to operational principles and techniques for all phases of flight. Additional training topics include:

- Understanding weather radar fundamentals
- Increasing situational awareness through a combined use of airborne weather radar and NEXRAD
- Weather avoidance decision-making and utilizing risk management practices
- Operational weather radar techniques with an emphasis on tilt and range management
- Weather radar display interpretation
- Automation management and competency
