

LIEBHERR AND AMETEK MRO AEM COOPERATE ON E-JET E1 LANDING GEAR OVERHAUL

News / Maintenance / Trainings

Riding on the stable high market demand for MRO landing gear services in the EUMEA region, the partnership enables Liebherr-Aerospace to off-load contracted landing gear work to AEM, a highly qualified and well established MRO landing gear provider based in Ramsgate (UK). This agreement will increase the number of available overhaul slots for E-Jet E1 aircraft, while the reliability of the service offer will be backed through the partnership between Liebherr-Aerospace and AEM.

Christian Franz, Director Customer Service of Liebherr-Aerospace Lindenberg, commented: "For our customers, this partnership generates more flexibility and availability in planning and selecting overhaul slots, which will optimize the fleet operation of our E-Jet E1 customers."

Andy Wheeler, DVP and Managing Director of AEM, said: "AEM is delighted to partner with Liebherr-Aerospace to supply E-Jet landing gear overhaul services. Our Ramsgate team has many years of experience in providing the quality of service that Liebherr-Aerospace's customers demand. This partnership further cements AEM as a leading landing gear maintenance provider and complements wider landing systems capabilities offered by AMETEK MRO."
