MAJOR REPAIR OF RUSSIAN-MADE HELICOPTERS CARRIED OUT IN AZERBAIJAN FOR THE FIRST TIME

News / Business aviation, Maintenance / Trainings

The Service Center for helicopter major repair at Silk Way Helicopter Services carried out the major overhaul of Mi-8AMT/MTV helicopters for the first time.

The decision to create such a center in Azerbaijan was taken in 2016 within the framework of the Azerbaijan International Defense Exhibition (ADEX).

As part of the first phase of its activity, since November 6, 2017, major repair of Russian-made Mi-8AMT/MTV helicopters began at the SWHS's base airport Zabrat. The repair was carried out and controlled by the specialists of the Russian Aircraft Repair Plant No. 356 (Engels) with the direct participation of the Airline's specialists.

Repair of Mi-8AMT/MTV helicopters was carried out at a professional level jointly with specialists of Silk Way Helicopter Services LLC.

In accordance with the instructions of the Aircraft Repair Plant, the dismantled units were sent for repairs to the plant No. 356 (further repairs of this equipment are planned in Baku as further mastering of helicopter overhauls.) The fuselage of the helicopter and avionics were also repaired after the condition inspection.

Equipment, special units, and consumables, fuel and lubricants used during the aircraft repair were fully provided by Silk Way Helicopter Services.

The establishment of such a center is a new stage in the development of the aviation industry in Azerbaijan, which creates an impulse for further development of air equipment repair in Azerbaijan, not only for local goals, but also for attracting foreign participants of the aviation market.
