

NEW "SAFEDRONE" PLATFORM MINIMIZES RISKS FOR PILOTS AND DRONES

News / Maintenance / Trainings

“SafeDrone by Lufthansa Technik” is a new initiative for minimizing uncertainties and risks in unmanned aviation. The open and completely transparent platform allows collaboration between all interested market players and provides them with direct access to recognized standards for technology, quality and security in the use of drones.

A basic package is available free of charge for drone pilots and service providers and their aircraft that allows them to register and become qualified as well as certified under the “SafeDrone Code of Conduct”. In addition to an introduction to unmanned aircraft systems, components, and flight and control fundamentals, participants also receive basic training in flight safety, aerodynamics and meteorology. Every participant receives a safe flyer certificate upon completing the training.

The contents of the free online training were compiled by experts at Lufthansa Technik and Lufthansa Aviation Training under consideration of the requirements of several regional aviation authorities. This will ensure optimal awareness and competency among service providers and pilots in the safe and responsible use of their drones.

“As members of the ‘SafeDrone’ community, registered users receive online access to checklists and up-to-date information in addition to an identification plate for their drones,” says project team member Olaf Ronsdorf. Moreover, customers also receive premium discounts when taking out liability insurance for their drones. The package will be extended continually for discerning and professional users with the inclusion of additional components.

Lufthansa Technik will present “SafeDrone” live from 20 – 24 March 2017 at the CeBit trade fair in Hannover at Hall 17, Stand A30.

20 MARCH 2017
