

ONFLIGHT RECEIVES AUTHORIZED SERVICE CENTER APPROVAL FOR EMBRAER EXECUTIVE JETS AIRCRAFT

News / Business aviation, Maintenance / Trainings

OnFlight of Cincinnati, Ohio, announced milestone approval and authorization as an Embraer Authorized Service Center by Embraer Executive Jets. In this capacity, OnFlight further expands Embraer's strategic network of MRO services, becoming an Embraer Authorized Service Center focused on Embraer aircraft. OnFlight, a Part 135 Charter Operator since 2000, has operated Embraer aircraft since 2011, with exclusive Embraer focus since 2016. With this announcement, OnFlight's strategy further expands to include Part 145 Repair Station Operations dedicated entirely to Embraer aircraft. Operations are expected to commence early in Q1 2024 at the Cincinnati Lunken Airport.

David Crocket, OnFlight's President, commented: "We have chosen to intentionally focus exclusively on Embraer's product line, based on extensive knowledge of these aircraft, Embraer's state-of-the-art technology, and overall quality of design and manufacturing. This singular focus ensures a high level of expertise and efficiency versus other independent alternatives who offer generalized service on numerous aircraft types and models, each presenting complex customer support challenges."

Frank Stevens, Vice President MRO Services, Embraer Services and Support, said: "We are very

pleased to deepen our relationship with OnFlight. This new approval will allow us to meet the high demand across the entire Executive Jets network. Expanding our capacity, capability, and footprint is an important step to continue to bring value to our customers."
