

TARMAC AEROSAVE OBTAINS PART-147 APPROVAL

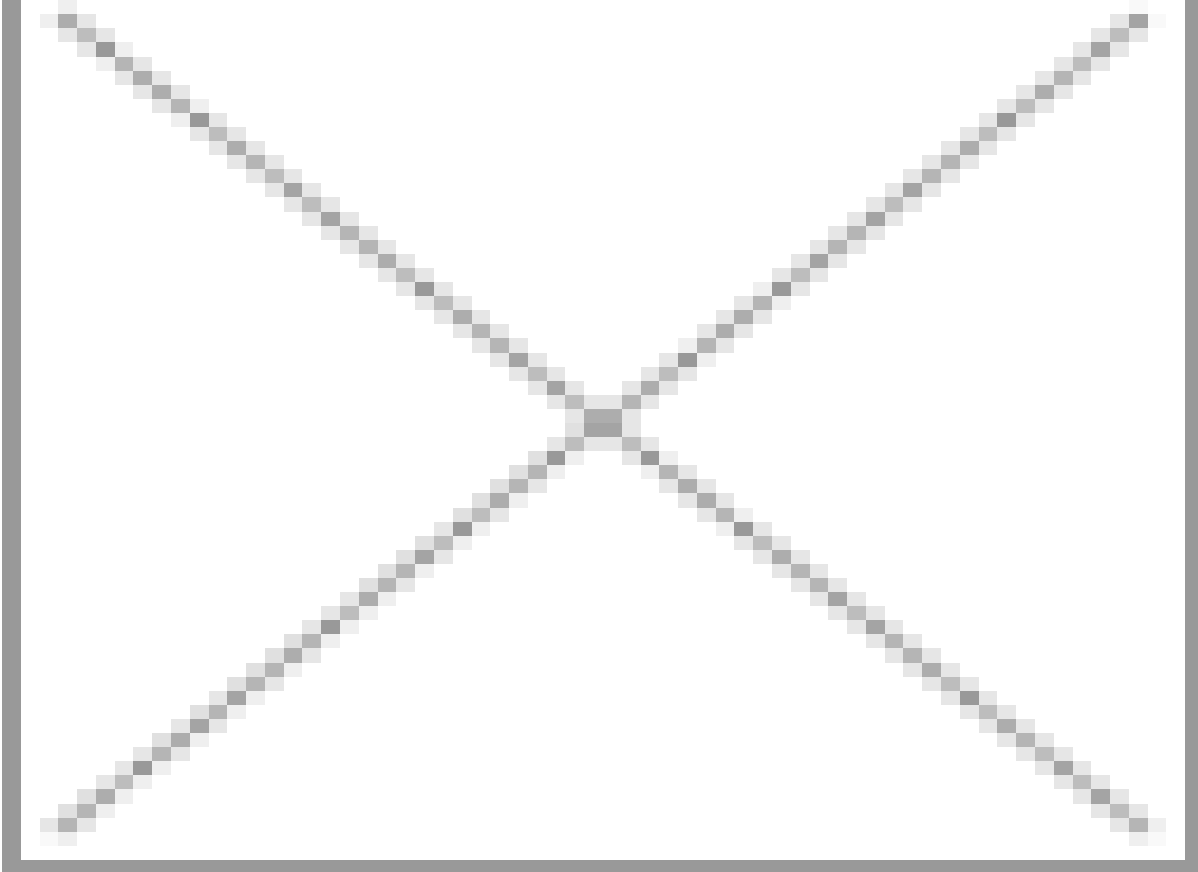

News / Maintenance / Trainings

TARMAC AEROSAVE, the European aircraft storage and recycling company, based in Tarbes (France) and Teruel (Spain), has obtained part-147 approval means that TARMAC AEROSAVE is now a maintenance training organisation.

With Part-147 approval, TARMAC AEROSAVE has become a maintenance training organisation for all its sites. This means that it can deliver type ratings for Airbus A320, A330, A340 and Boeing B737-6/7/8/9 families, as well as mandatory training.

TARMAC AEROSAVE has also obtained EN-9120 approval involving the supply and import-export of aircraft spare parts and engines, with all related logistics.

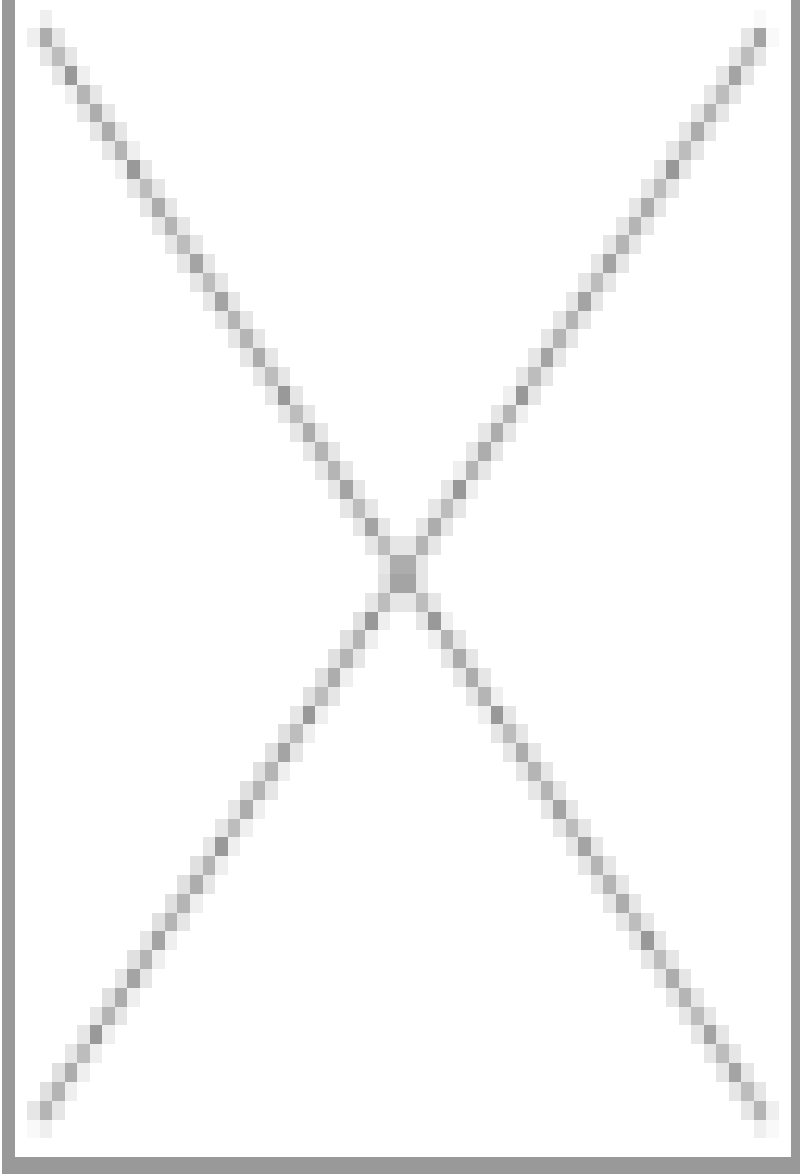

With these new approvals, TARMAC AEROSAVE now has a full portfolio of services for all commercial aviation operators.

After delivery of a new 3,000 m² logistics building, in early 2016, and customer offices in Tarbes, TARMAC AEROSAVE continues to extend its facilities.

In Teruel, the storage development work is now finished. Meanwhile, a new mid-haul hangar will be available in early 2017.

In Tarbes, new investment is underway, including a 7,500 m² logistics building which will be available at the beginning of 2017, storage extensions able to accommodate twenty very wide-bodied aircraft by mid-2017 and a hangar for painting aircraft to accommodate very wide-bodied aircraft, including the A380, which will be operational at the end of 2017.

image not found or type unknown

Eventually, TARMAC will therefore have three hangars to accommodate very wide-bodied aircraft, 15,000 m² of logistics hangars, and aircraft storage for up to sixty wide-bodied aeroplanes.
