

VECTOR AEROSPACE'S ENGINE TRADING TEAM POISED FOR GROWTH

News / Maintenance / Trainings

Vector Aerospace, a global independent provider of aviation maintenance, repair and overhaul (MRO) services, is excited to announce the continuing growth of its dedicated **Engine Trading team**.

Since its creation a little over a year ago, the Engine Trading team has enjoyed strong engagement from the market place, with customers worldwide appreciating the range of services offered by the team. These include:

- Short- and long-term engine leasing
- Engine rental pool management
- Sale of serviceable engines
- Engine exchanges
- Acquisition of engine assets (serviceable and cores)
- Serviceable part sales and support (PT6A, PW100 and JT15D)
- New part sales support (PT6A and JT15D)

"Being in a position to offer additional solutions within the Vector brand was one of the inspirations behind the formation of this group," says Troy Forrest, Vice President of Engine Trading. "Providing a host of ancillary offerings that enhance Vector's primary maintenance, repair and overhaul (MRO) services has already shown positive results. We are able to offer solutions beyond the overhaul or repair of a customer's engine when timescales, funds or logistics dictate, thereby maximizing aircraft availability while minimizing costs."
