

TAMARACK - SETTING NEW STANDARD IN SUSTAINABLE AVIATION - INTERVIEW WITH JACOB KLINGINSMITH

News / Manufacturer

The topic of sustainability in aviation is more than actual. New technologies are developing at a fantastic speed. Are there solutions that can "change the game" here and now? The answer is yes. We have been following closely the success of this group that offers solutions available now! The technology that can be adapted to fit any existing aircraft quickly and economically, delivering an astounding reduction of CO2 and other emissions. Tamarack Aerospace Group SMARTWING technology is proven, having already been retrofitted to over 150 aircraft, delivering extraordinary results.

As we reported end of 2022, Tamarack Aerospace is currently in serious discussions with major airlines for A320 modifications and for lease operations and charter services. We found the best way to know more and find answers for our questions - talk to Jacob

Klinginsmith, President of Tamarack Aerospace Group. Watch and listen, here are some essentials of our discussion:

- **Tamarack the first time at MEBAA SHOW;**
- **Discussions with potential partners for the use of the technology for Airbus A320;**
- **Economic and environmental savings;**
- **Shaping new possibilities in safety, performance, & comfort;**
- **A look back at the results and achievements with Tamarack solutions for Cessna and King Air at NBAA-BACE;**
